

Anthony Hodgson, Ph.D., F.R.S.A., Member IFF

I am a founding trustee of *H3Uni – towards a university of the third horizon*. This as an initiative born out of the recognition by a small group of foresight and strategy practitioners that most higher education does not address the huge shift in the skills of collaboration and resilient thinking that are needed to successfully navigate a turbulent world challenged by major issues not previously experienced on a global scale.

I have had over forty years of experience of providing consulting and facilitation services in foresight and strategy to international corporations and in the public sector in the UK. It is in this role that I developed new methods of participative repatterning of shared thinking in groups

As an experienced practitioner of systems thinking and scenario futures methods I am a founder member of the International Futures Forum think tank working especially on transformative innovation and new methods of cooperation to match the needs of the Anthropocene.

My doctorate is in systems science from the University of Hull. As a Research Fellow with the University of Dundee I am currently doing original work on integrating foresight methods with systems thinking and modelling through second-order cybernetics, phenomenology of time perception and futures methods. As well as published papers I have published a book on some of this work *Systems Thinking for Turbulent Times: A Search for new perspectives* (Routledge, 2020)

I am also an Honorary Research Fellow at the University of Dundee and on the Editorial Board of *World Futures: the journal of New Paradigm Research*.
